Fall TIPS Case Studies

Case #1

- Jane, 39 year old female, admitted with chief complaint of 'seepage' of clear yellow fluid from her compression stocking. She has a past medical history of spina bifida, memory impairment, AV shunt and lymphedema.
- She was treated with IV antibiotics and dressings.
- Patient was wheelchair bound.
- Patient refused to ask for assistance with transfers to wheelchair (significant fear of electronic lift) or commode.
- Patient refused Physical Therapy during her 5 day admission.
- Multiple requests were made to have patient ask for assistance with transfer.

List the Fall TIPS interventions that are appropriate for this patient: _____

- Dave, 45 year old man with traumatic brain injury, with a history of diabetes, osteoarthritis and hypertension, was admitted on 7/1/16 after a vehicular accident. Other injuries included fracture of left tibia/fibula which has been placed in an air cast pending definitive treatment.
- He has been impulsive and had been in a vale bed, but had been moved to a regular bed because he appeared to have better control. He has an IV in place, using crutches to walk with physical therapy only, and is only pivoting to use commode or sit in chair with assistance. While in bed or in chair, alarms were used.

List the Fall TIPS interventions that are appropriate for this patient: _____

- On Sunday evening, the nurse was in the room attending to the other patient, the patient Dave's bed alarm went off. By the time the nurse reached patient, patient was out of bed and fell on floor on buttocks.
- On inspection, the patient had an abrasion with a small laceration on left arm with mental status that was similar to above pre-fall assessment. Further assessment and examination revealed no other visible injury. Patient placed back in bed. Physician was notified. The resident arrived and assessed the patient for other injuries from fall.
